

EtroX® I CM natural

PI

The premium product for highly demanding applications

Our premium material EtroX® I CM was specially developed to meet the high demands of the electronics, aerospace and automotive industries. As a pure polyimide, it withstands particularly high temperatures. EtroX® I CM can be used to design components that offer significant advantages over other thermoplastics.

Operating in the following industries

电子

航空航天

Semiconductor Industry

车辆构造

Extended characteristics

Advantages of a premium material

High tensile strength, with adequate impact strength, stiffness and dimensional stability make it a premium material for demanding applications.

Easy processing

EtroX® I CM can be machined to tight tolerances using conventional CNC machines.

Long lifespan

Our material has a low wear rate so that components made of EtroX® I CM can be used for a long time and thus increase efficiency in the application.

High mechanical strength

Even at high operating temperatures of more than 250 °C, EtroX® I CM has a high mechanical strength, so that the material can replace metals.

High temperature resistance

The material's low inherent flammability is particularly important for applications with a high safety risk.

Application examples

Thrust washer for electric cars

Test socket for final chip testing

Gripper for glass bottles
